Single Channel Mist Controller—1A, B, C

The single zone controller is designed for a single bench or “zone”. A 24v plug-in transformer is supplied to drop in the incoming 120v to 24v at the outlet.

Wire your solenoid valve to the terminal strip on the bottom of the unit, attach the power cord (unless already attached) and plug the unit into the wall outlet. Set the “Seconds of On Time” and the “Minutes Between On Time” knobs. The unit is now ready for misting.

Do not put 120v directly into the unit! The unit must have the transformer attached for proper operation.
